

Gravity helped pull together stars, planets, and galaxies so they could form.

Gravity is the force that pulled matter together, forming stars, planets, and galaxies across time.

Gravity helped pull together stars, planets, and galaxies so they could form.

Gravity is the force that pulled matter together, forming stars, planets, and galaxies across time.

Gravity helped pull together stars,
planets, and galaxies so they could
form.

Gravity is the force that pulled matter
together, forming stars, planets, and
galaxies across time.
