

# CROSS OUT SINGLES

## Instructions

- Roll a D6 and put that number in any spot in 3x3 grid. Continue rolling and placing numbers until all 9 spots are filled up.
- Add up your rolls. Go horizontally, and vertically and put the sum of those three numbers in the circle. Go diagonal for the last circle.
- Look at the numbers in the circles and cross out any number that doesn't have a match.
- Add together the numbers that have matches.
- Highest Score wins!

## Variations

- Allow the use of a calculator for students who struggle with the addition.
- Try out using different sided dice and see how it changes the game
- Change the size of the board (it needs to stay as a cube!).
- Play where the doubles get crossed off and you add the single numbers!
